The present invention subsets to seven ambers of the Above (proceins which contain. A Distingering that Add Westleprocesse domain) protein family. The ADAW conceins and DNA way be used to creat distense as a food additive or preservative, for chiracomose identification, as probes for disposuing and additive system.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          331 WYTGPWGECSSECGSGTQRRDIICVSKLGTEFNVTSPSN-CSHLPRPPALQ-----PCQG 384

No. is the number of results predicted by chance to have a
core greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
